

Exclusively JOHNSON!

• SHOCK PROOF WOOD and CAST ALUMINUM LEVELS

Made only by Johnson under U. S. Patent No. 3,190,010

No Other Can Offer These Features:

SNAP IN VIAL HOLDERS hold vials firmly but not rigidly without strain - eliminates breakage from shock. Designed especially for mason and carpenter levels.

SPECIAL DESIGN internal lock aluminum edge binding inside the wood, not on the outside wearing surface. Cannot come out even when worn down. More protective thickness lasts longer with this new design. Metal end plates secure the binding.

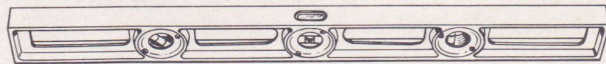

MASON LEVELS in Mahogany, Pine and Cast Aluminum have 2 level and 4 plumb vials in adjustable shock proof vial holders. Size 2-3/8" x 1-1/8", approximate weight 3-1/2 lbs. each. Metallic sealed catseye or clear vials.

- **NO. 748-48 INCH** has aluminum binding and end plates; solid mahogany; grooved finger grips and rich lacquer finish. Also available in 42, 28 and 24 inch lengths. 800 line is with end plates only and 900 line is plain without binding or end plates.
- **NO. 1048-48 INCH** is mahogany with 6 vials in 5 round openings. Bound with end plates. Also available in pine (No. 1148).
- **NO. 48-48 INCH** Heavy Cast Aluminum, precision ground edges, 6 vials in round shock proof holders. Also available in 30, 28 and 24 inch lengths in 6 or 4 vial styles.
- **NO. 1348-48 INCH** sugar pine, 3 round openings, 6 vials, plain or aluminum bound, or end plates only. Clear Natural finish.

NEW COMPLETELY ENCLOSED TOP READING level vials are a Johnson first. Top opening has protective window to exclude dirt and moisture. The vial is always clean and easily read from top or side. A boon to plumbers and electricians.

- **NO. 324-24 INCH** CARPENTER LEVELS made of straight grain pine, exclusive top reading level vial and 1 plumb and 45°. 18 and 48 inch lengths also available.

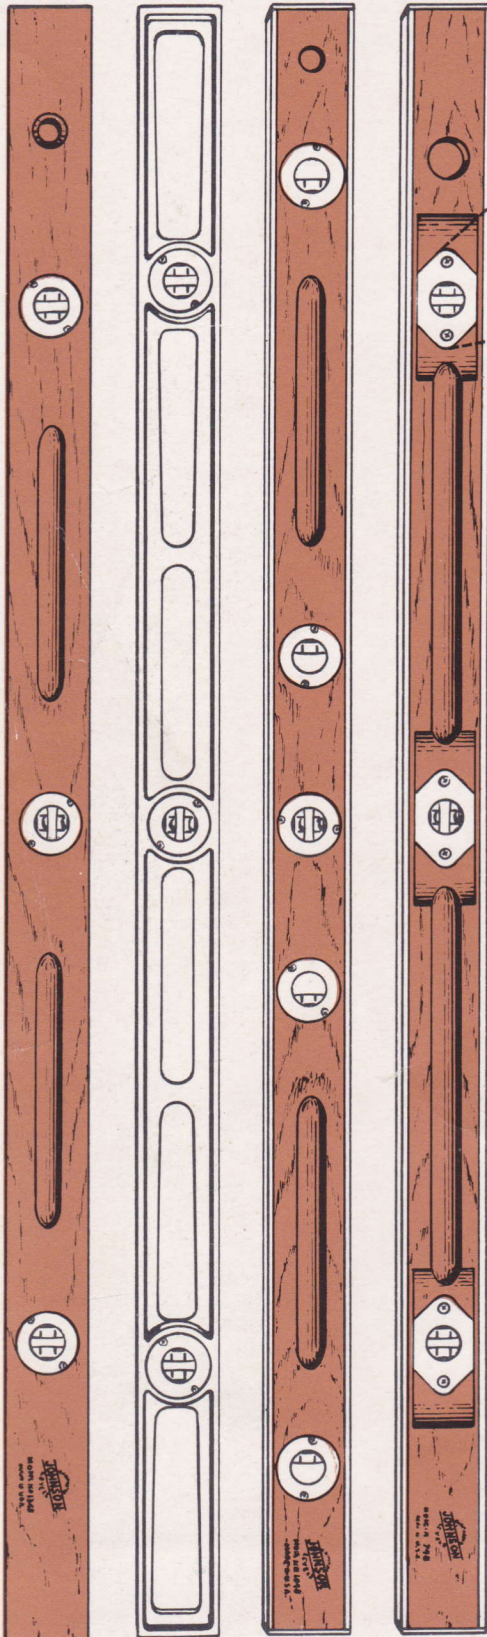

- **NO. 2400-24 INCH** CAST ALUMINUM with top reading feature. Other lengths of 28, 30 and 48 inch available. Heavy frame. The first shock proof top reading cast level with enclosed level vial.

- **NO. 124-24 INCH** UTILITY PINE LEVEL has 2 vials; 1 level and 1 plumb. Can be had in 18 and 12 inch lengths. Shock proof and economy priced.

JOHNSON LEVELS are truly modern, improved where they needed to be improved to make them more practical and durable for today's needs. Remember, only JOHNSON makes these revolutionary guaranteed shock proof levels.

NOW IT CAN BE TOLD!

OUR NEW IMPLEX[®] VIAL HOLDER IS THE ULTIMATE IN HOLDERS - NO ONE HAS ONE LIKE IT - WE DESIGNED IT EXCLUSIVELY FOR JOHNSON LEVELS. It grips the vial securely so it CANNOT COME OUT, EVEN WHEN DROPPED, yet cushions the vial against impact. NO ADHESIVES, GLUES OR OTHER UNCERTAIN BINDERS are used or needed !

Exploded view shows the two parts, each with one vial, are fitted to the level frame.

Patent applied for

® Trade Mark
Rohm & Haas Co.

Here are the special features :

Each vial is gripped in the holder so it cannot move or turn, yet is replaceable .

Protecting windows are snapped in and replaceable.

Implex is new; contains enough elasticity to permit prongs to spread for inserting vial yet stiff and tough; resists wear and outdoor weathering.

Each vial is individually adjustable; plated machine screws lock each holder in position.

The finest vials obtainable are used. Precision is maintained because they are machine made, hydrostatically tested.

Vials have no tip to break off; ends are flat and solder sealed. Have accurate and uniform curvature for consistent sensitivity.

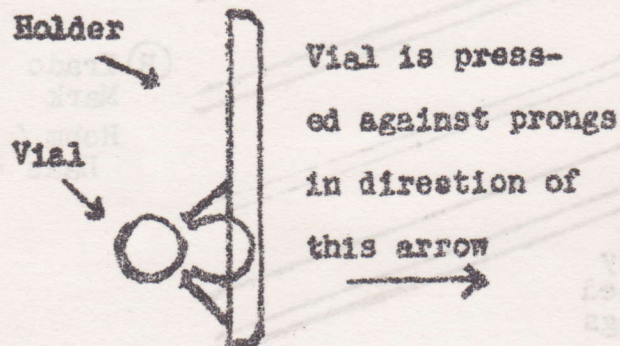

Preset replaceable holder and vial units can be installed easily; only two screws to loosen.

Material, workmanship guaranteed

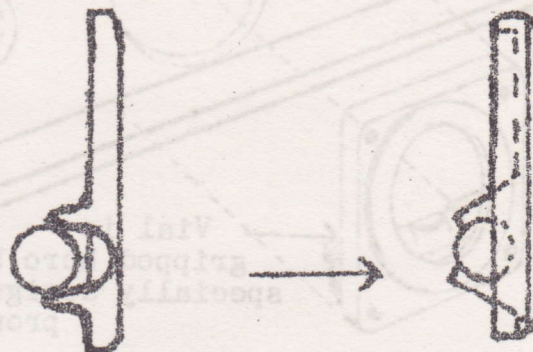

NO MORE LOOSE OR BROKEN VIALS
DROPPING OR JARRING WILL NOT DAMAGE
VIAL OR SETTING .!

Here's how the vial is inserted in the holder and held by the spring grip of the IMPLEX prongs. Rough sketch shows end view of holder and vial. #1 - ready to insert; #2 vial spreading the prongs; #3 - vial in place in the holder.

Step 1

Step 2

Step 3

As vial is pushed against the prongs, as in Step #1, prongs are spread, as in step #2. Permanent elasticity of Implex ALWAYS HOLDS.

When further pressure is then applied to the vial it snaps into the recess and prongs resume original shape, firmly holding vial in place, as step 3

VIAL CANNOT COME LOOSE or MOVE (except by prying vial out for replacement) . NO ADHESIVE USED IN THIS METHOD

Another Johnson Level Development.

NOW-A PERMANENT

ANODIZE FINISH on our
SHOCK-PROOF EXTRUDED

ALUMINUM LEVELS

AT NO INCREASE IN PRICE TO YOU

This is an electrolytic process that puts the protective aluminum finish right on the metal. It costs us more than a sprayed finish but is worth it because it

WILL NOT CRACK, PEEL or SCRATCH OFF

IS PERMANENT-(NOT A PAINT)

RESISTS OILS, MOISTURE, SALT CORROSION

CLEANS EASILY-Just wipe off dirt

MAKES A BEAUTIFUL, SMOOTH, SATIN FINISH

REDUCES ADHESION of MORTAR, MUD, etc.

All these advantages and Shock-Proof
too, at our regular

CURRENT LOW PRICES
